Snow Guard Styles

PAD

Pad-style snow guards add friction to a frictionless surface, preventing a sudden avalanche of ice and snow. Traditional pad-style snow guards feature our "fish head" design, which provides optimum strength while maintaining aesthetic integrity. Since our pad-style snow guards are riveted, there is no risk of unfolding. Pad-style snow guards are widely used for both residential and commercial applications.

PIPE

Pipe-style snow guards act as barricade systems, preventing large pieces of snow and ice from falling off a roof. Precision engineering makes our pipe-style snow guards not only extremely durable, but beautiful as well. Our pipe-style snow guard assortment includes two-pipe and three-pipe systems, as well as several height adjustable bracket options to accommodate a wide range of roof pitches. Originally used for commercial applications, many homeowners are now choosing pipe-style snow guards when making a conscious decision to protect their home's immediate surrounding area from falling snow and ice.

FENCE

Fence-style snow guards also act as barricade systems, preventing large pieces of snow and ice from falling off a roof. We designed our fence-style snow retention systems, SnowMax & Solar SnowMax to be the strongest fence-style systems on the market. Fast and easy to install with bracket spacing up to 48" on center, our fence-style snow guards are fabricated from aircraft-grade aluminum, resulting in extremely rugged products. Available in attachment options suitable for metal roof types, as well as for membrane roofs.

SOLAR

Why is solar snow management necessary? The calculated snow load of a solar panel is approximately 800 lbs/panel (50 lbs/sf x 16 sf average per panel). Solar panels (by their nature, glass/hard roof surface, no friction) allow built up snow to release in an avalanche manner, with the potential to cause serious injury, damage or even death.

Roof Type: Solar

Designed by snow management industry experts

All of our solar snow management solutions can be used on either portrait or landscape orientation solar arrays

A full line of solar mounting & rail-free racking systems is available from our Sister company, EcoFasten Solar. Call 877.859.3947 or email info@ecofastensolar.com

**EcoFasten
Solar®**

Solar SnowMax-R2

- Installs on eave-edge of array
- Highest fence option available
- Accepts color insert strip
- Frame-mounted

Solar SnowMax-Standard

- For additional up-slope tiers
- 2" tall fence is frame-mounted
- Accepts color insert strip

Solar Snow Pad

- For additional up-slope tiers
- Accepts optional 3/8" rod
- Pad is frame-mounted
- Can be powder coated
