About Us

ECI Systems (ECIS) is widely recognized as a leader in the design, integration and management of access control, IP video, intrusion technologies, door solutions and life safety systems. ECI Systems provides a wide array of professional services that include: system design, CAD, field installation, field service, training and equipment repair.

ECI Systems takes a collaborative approach to the design and implementation of our integrated solutions and has successfully designed, managed and integrated solutions across a wide array of clients and industries. Our verticals include: higher education, K-12, healthcare, pharmaceutical, life sciences, manufacturing, supply chain, high-tech, property management, real estate, public use, transportation & logistics to name a few.

Originally founded in 1990, ECI Systems was acquired in 2016 and is affiliated with SPS New England Inc. ECIS provides design and system integration services nationally.

Customer Solutions Center

Our Customer Solutions Center is equipped with the systems and solutions ECI Systems offers to our wide array of customers. These technologies represent the, "very best," the security industry has to offer. Our goal is to give our clients and partners a hands on environment and experience. We strive to do all we can to help our customers make the most informed purchasing decision.

Training Center

Our state-of-the-art Training Center is equipped with all the necessary tools and applications that provide our clients with a quality training experience. This ensures our customers are able to receive hands on training on all aspects of their security solution. Our facility features the latest technologies that provide the most comprehensive training available.

Design & Engineering

Our unique in-house engineering, design and CAD solutions raises the bar of security design. Our comprehensive 3D rendering provides visualizations of proposed solutions and resulting impact on the existing architecture.

Our CAD Group has in place security standards, guidelines and enforced quality control elements. From the initial proposal to project completion; these intricate drawings detail system devices and their locations that are critical from a service and maintenance perspective.

"I wanted to thank you again for getting someone right out to our store yesterday. I received a text from the manager this morning thanking you as well. By the way, the store managers, district managers and the resource protection managers (like myself) all LOVE the quality of the video – nice job."

Resource Protection Manager
National Retailer

"I could not have been more happy with the installation, professionalism and respect the ECI Systems team had for our facility. More importantly; the care and respect they showed our patients was second to none. Our access control project was completed on time and as designed. We look forward to working with them on our future projects."

Site Facilities Manager
Assisted Living Facility

"You took a complex integration and delivered excellent results. This project was spread out over many months and you hit each milestone on time and on point. The quality of the install was exactly what you promised."

Construction Manager
Pharmaceutical Manufacturer

"We appreciated the level of service and support we received for the initial 3-year term of our contract. Supporting a municipal department with these many offices and spread out all over the State is not an easy task. Your customer service response has been top notch and we are very comfortable to continue working with your technical staff and support personnel. Extending this contract makes a lot of sense."
