

Finally. A ceiling without limits.

Popcorn ceilings make your home look dated, limit the market value of your investment property, and they often contain toxic asbestos. What if you could quickly and easily get ceilings with a perfect, flawless finish, recessed LED lighting options, and avoid messy and dangerous scraping? Would the value of your home or property increase?

A Stretch Fabric Ceiling is the answer to your popcorn ceiling problem.

POPCORN
CEILING
SOLUTION

Popcorn ceiling removal is messy and disruptive to the environment. For those with allergies, it can be a real nightmare. If asbestos is present in the ceiling materials, the process becomes toxic as cancer-causing materials are released into the air upon removal. **There's a better way to deal with your popcorn ceilings: a stretch fabric ceiling system.**

A stretch fabric ceiling is just what it sounds like — fabric is stretched across your ceiling and held in place by a perimeter track that's mounted to the wall. The system is durable, flexible, and customizable. Installation is fast and clean compared to other ceiling remediation solutions. Our system is a simple yet effective solution to encapsulating your old textured popcorn ceiling — without the mess, inconvenience, or health risks.

Another benefit of our stretch fabric system includes innovative LED lighting installation. **Now recessed LED lights can be installed even in apartments with concrete ceilings!**

Popcorn Ceiling Solution is the premier distributor of DESCOR® stretch fabric system in North America. Our mission is to connect our clients with experienced installation professionals.

Endless Possibilities

It's more than a ceiling,
it's a work of modern art.

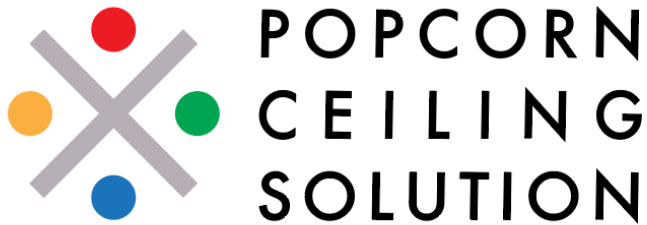

A stretch fabric ceiling offers unlimited design potential! In fact, homeowners interested in modern interior design contact us all the time to install our ceiling systems because we are able to offer:

- Ceiling Leveling
- Soundproofing and Sound Absorbent Treatments
- Installation of Lighting, Speakers, Vents and other Ceiling Fixtures
- Printed Acoustic Wall and Ceiling Murals
- Printed Backlit Ceilings and Walls

Our 100% knit polyester fabric is infused with a water-based PU coating and manufactured in Europe using state-of-the-art, non-woven technology, making them some of the most durable ceiling and wall coverings in existence. Our fabrics are also mildew resistant, so **you can install our stretch fabric ceilings in bathrooms, saunas, hot yoga studios, swimming pools, or damp basements.**

Our stretch ceilings are durable and **will not crack, sag, or peel**, offering a great return on investment. The longevity of the fabric and the strength of the perimeter track are the reasons **our stretch fabric ceilings come with a lifetime residential warranty.**

The Popcorn Ceiling Solution Promise

Personalized support - From the moment you contact us, our stretch ceiling experts are on call to answer all your design and installation questions.

We treat *all* of our clients like our most important client because we believe the future of the stretch ceiling industry largely depends on the experience of our first-time customers. Our mission is to make this material and technology available and accessible.

Exceptional Knowledge - Though our products have multiple commercial applications, we understand the particulars of residential construction and the values of homeowners.

Unparalleled experience - Some of our installers were developing their installation techniques in Europe even before stretch ceilings made their way to the US. We know and stand behind our product and experience.
