

## BUILT TO EXACTING SPECIFICATIONS

**U**ltimate Vinyl Windows are built to exacting specifications. Each stage of the manufacturing process incorporates state-of-the-art window frame and panel construction techniques.

- Fusion welded, mitered corners remain permanently square and minimize gaps and leaks that can cause air and water infiltration.
- Multiple hollow chambers make the frame thermally efficient and extra strong.
- Interlocking panels prevent wind and water penetration.
- Many glazing options are available including insulating glass.
- Standard and custom sizes are available including half rounds, quarter rounds, ellipses, trapezoids, and other popular shapes.
- Ultimate windows are tough—they will not rot, warp, or corrode. They stay looking new because the color is integrated into the vinyl. What's more, Ultimate windows are easy to clean with soap and water.

Ultimate Vinyl Windows remain attractive and energy efficient for life—no matter what kind of weather they face.

- You no longer have to settle for white windows.
- Custom color matching available for the color to match your job.

## A TRADITION OF QUALITY

**U**ltimate Windows has been a leader in quality window manufacturing for over 20 years. That's because our mission is simple: Build high performance windows at a reasonable price. Throughout the years we've maintained some of the highest aesthetic, construction, and high energy efficiency standards in the industry.

## SETTING THE STANDARDS IN VINYL WINDOWS

Ultimate Vinyl Windows are engineered to exceed all industry standards. They begin as a vinyl composition created through cutting-edge compounding techniques. The extrusions formed from this unique blend provide superior impact heat resistance, increased color retention, and enhanced UV protection over other standard PVC formulas.

Each vinyl extrusion is subjected to extensive testing for dimensional tolerance, shrinkage, and durability. And all of our window prototypes go through an exhaustive battery of tests to insure that they meet or exceed industry thermal and structural standards. We even test for forced entry, so you can rest assured that your home is protected from all types of infiltration.

## ENJOY MAXIMUM COMFORT WITH ULTIMATE VINYL WINDOWS

Ultimate Vinyl Windows are designed to make your home a more beautiful, energy efficient, and comfortable place to live. And nobody deserves comfort more than you.
